*(Birdem Med J 2014; 4(1):56-58)*

JAMAL UDDIN AHMED, SAMIRA RAHAT AFROZE

A 60 years old diabetic male presented with Fever of Unknown Origin and bilateral leg edema for one and a half months. He also complained of diffuse abdominal pain, sense of heaviness in right hypochondriac and lumber region, and occasional breathlessness.

Examination revealed mild anemia and ascites. Investigations showed microscopic haematuria and altered liver functions. A contrast CT scan of abdomen was done which is given below.

***What is the diagnosis?***
