Comment 1

Kindly ensure that the plagiarized text remains below 15%.

Response

The change has been made.

Comment 2

Ensure that no texts are generated by artificial intelligence (AI).

Response

I rechecked and corrected all texts.

Comment 3

Use the table format given in the file.

Response

Updated

TECHNICAL EDITING

Round 1

9 October 2023

Reviewer A:

Comment 1

There are a lot of mistakes in spelling, sentences, and punctuation.

Response

Corrected

Reviewer B:

Comment 1

A title should be self-explanatory and should indicate the study type. Your study title must be clearer and more indicative as it is a review article.

Response

The title has been revised.

Comment 2

The systematic selection of research papers might be more effective visually if you add a flow chart of research paper recruitment for this systematic review.

Response

I appreciate your comments. Instead of creating a flowchart, I have outlined the article selection process step by step in the methodology section. Additionally, considering the relatively new nature of the topic, there were limited articles available online. As a result, including only a few exclusions in a flowchart with a few steps might appear unconventional.

Comment 1

The reference you provided still does not exist. Additionally, there is a discrepancy between the DOI and the references. Could you please rectify all references with the correct DOIs? We anticipate a response within the next 3 days.

Response

I have checked all the references and put the DOIs.
