

## Editor's Note : Plagiarism

Plagiarism means the practice of taking someone else's work or ideas and passing them off as one's own.

Plagiarism is not acceptable in medical journals where high standard of originality is required to be maintained. In all forms of articles whether original, review, special & case reports, this is necessary.

In our journal, we also extremely discourage plagiarism.

But there are some trends among few doctors to copy older articles and reproduce it in part of full as one's own article.

At one time, it was difficult to detect all those theft when no detection devices were available. But now, with the advent of Plagiarism Software, it is easy to detect the wrongdoing. Many of these softwares are available free in the webs.

In our journal we are equipped with very advanced plagiarism detector-CrossChek. CrossCheck is one of the best softwares in this line. Hundreds of journals, publishers and institutions are using CrossCheck for keeping their published products pure and standard. As we are a free access journal and is a member of Banglajol Online, iThenticate, the original publisher of CrossCheck is supporting us with their software.

We hope that the authors of this journal will note the fact and save themselves and us from any embarrassment.

Best regards

**Professor Md Badruddoza**

Editor-In-Chief

CMOSHMC Journal

## Letters & Opinion

### **"Ponseti Technique is the Best Option for the Treatment of Idiopathic Congenital Club Foot by the Age of Two Year"**

(Volume 14, Issue 2, July 2015)

To  
The Editor-In-Chief

On the above article, I have the following observations :

1. Title is not appropriate as it is not a comparative study.
2. How say best ? Is it statistically significant ?
