

## SOME MORPHOLOGICAL OBSERVATIONS OF CHAROPHYTES (CHARACEAE) FROM BANGLADESH

Sabrina Naz and Nasrin Jahan Diba

Department of Botany, University of Rajshahi,  
Rajshahi-6205, Bangladesh.

**Abstract:** Morphologically interesting charophytes were found from Chapai-Nawabgonj and Rajshahi districts in Bangladesh. These are: swollen branchlet of *Lamprothamnium papulosum* (Wallr.) J. Groves, long stalked gametangia and twin antheridia of *Nitella hyalina* (DC.) Agardh, bifid bract cells of *Chara flaccida* A. Braun and bifid end cell of *Nitellopsis obtusa* (Desv.) J. Groves.

**Key words:** Bifid cell, long stalked oogonium, twin antheridia, morphology, Charophyta, Bangladesh

সারাংশঃ বাংলাদেশের চাঁপাইনবাবগঞ্জ এবং রাজশাহী জেলা হতে ক্যারোফাইটার কিছু অঙ্গসংস্থানগত পর্যবেক্ষণ লক্ষ্য করা গোছে। এগুলো হলোঃ *Lamprothamnium papulosum* (Wallr.) J. Groves এর swollen branchlet, *Nitella hyalina* (DC.) Agardh এর long stalked gametangia এবং twin antheridia, *Chara flaccida* A. Braun এর bifid bract cells এবং *Nitellopsis obtusa* (Desv.) J. Groves এর bifid end cell.

### Introduction

Charophytes has gained the attention of the phycologists throughout the world since early stage of phycological research (Groves and Bullock-Webster 1920, 1924; Zaneveld 1940; Pal et al. 1962; Wood and Imahori 1965; Krause 1997; Subramanian 2002; Schubert and Blindow 2003). Present communication deals with some exceptional observations found in earlier described taxa during a detailed study (Naz et al. 2011) dealing with Charophytes of Bangladesh.

### Materials and Methods

Charophytes were collected from Mahananda River and wetlands (used for rice cultivation) in Chapai-Nawabgonj districts, Andharshura beel at Tanor upazilla and Kharoil beel at Mohanpur upazilla in Rajshahi districts. Chapai-Nawabgonj and Rajshahi districts are located at 24.73° N, 88.20° E and 24.40°N, 88.50°E respectively. Collected specimen were preserved in Transeau's solution (Transeau 1916) and herbarium specimen of each were also kept in the herbarium of Phycology and Limnology Laboratory, Department of Botany, University of Rajshahi in Bangladesh and Aquatic Ecology Department at University of Rostock in Germany. Photomicrographs were taken by Vivitar V3200 camera under a Reichert microscope (NR. 309209) and SONY DSC W-55 under compound microscope (Model L-101) respectively.

### 1. *Chara flaccida* A. Braun (Fig.1: A-F; Fig. 3:C-E)

*Synonyms:* *C. gymnopitys* Braun, Linnaea 25: 708.1852; *C. benthami* Braun, Monatsber. K. Akad. Wiss. Berlin (1867): 799; *C. fibrosa* subsp. *flaccida* (A. Braun)

Zaneveld, I.c., p. 162. 1940; *C. fibrosa* var. *fibrosa* f. *fibrosa* Wood, Taxon 11: 13. 1962.

(Pal et al. 1962, 95, Figs. 220-222; Wood and Imahori 1965, 289, 1964, Icones 125-128; Imahori and Sinha 1964; Islam and Sarma 1968, 366, Pl., 4, Figs. 29-36, Pl., 5, Figs. 37-45, Pl., 6, Figs. 53-54; Langangen and Leghari 2001,72; Subramanian 2002, 88, Pl. 32, Figs. 1-4; Naz et al. 2011, 65, Pl. 12, Figs. 1-15)

*Material studied, locality and occurrence:* Col. No. C 9, December 17, 2006. Kharoil beel, Trimohini, Mohanpur, Rajshahi. Water depth up to 5 cm; carpet like dense growth intermingled with *Chara vulgaris* of this specimen was found in the rice field (a part of the beel).

Bifid bract cells are frequently present and 2-celled apices of branchlet which is observed only once in the whole population of this specimen. Bifid bract cells are situated at apices of branchlet, rarely present at 2<sup>nd</sup> node of a branchlet; one bifid cell, rest are normal; Wood and Imahori (1965) described such bract cells in *Lychnothamnus barbatus* (p. 346, Fig 16); *Nitella translucens* var. *axillaris* f. *caroliniana* (p.687, Fig.28); bifid bracteols of *C. vulgaris* f. *kieneri* (p.89, Fig.3).

### 2. *Lamprothamnium papulosum* (Wallr.) J. Groves (Fig. 1: G-I; Fig. 3: A,B)

*Synonyms:* *Chara wallrothii* Ruprecht, Beitr. Pfl. Russ. Reich. 3: 12. 1845 (=var. *papulosum*); *Lamprothamnus alopecuroides* (Del. ex A.Br.) Braun in Braun and Nordstedt, Abh. K. Akad.Wiss. Berlin (1882):100.1882 (= var. *papulosum*)

(Groves and Bullock-Webster 1924, 7, Pl. 25, Figs.1-9; Pal et al. 1962, 83, Figs.182; Wood and Imahori 1965, 330, 1964, Icones 162-166; Blindow and Langangen 1995, 47; Krause 1997, 134, Fig. 53: A-J; Schubert and Blindow 2003,156, Fig. 4.18.1:A-G; Langangen 2004, 31; Langangen 2007,109; Naz and Diba 2009, 13, Fig A-D;Naz et al 2011, 44&45, Pl.2, Figs., 1-12)

*Material studied, locality and occurrence:* Col No.154, March 15, 2004. Specimen collected from Mahananda River bank depression at about 15 cm depth intermingled with other algae e.g. *Spirogyra*, *Chara braunii*, *Nitella furcata* subsp. *flagelliformis*.

Swollen branchlet with bract cells of *L. papulosum* is an interesting feature in present communication. The swollen branchlet (701 µm in diameter) of this species may be new observation in home and abroad. Morphologically similar branchlets without bract cells were Chara corallinaf. *Simplicissima*; syn. *Protochara australis* (p.328 Pl., 6, Figs. 6&7) by Wood and Imahori (1965).

### 3. *Nitella hyalina* (DC.) Agardh (Fig. 2: A-K; Fig. 4: A-G, I-K)

*Synonyms:* *Chara hyalina* DC. in Lam. and DC., Fl. Francaise 6: 247.1815; *Chara condensata* Rupr., Beitr.Pfl. Russ. Reich 3: 10. 1845 (nom. illeg.) (= var. *hyalina*); *N. longifurca* (Rupr.) Wallman, l.c., p. 24. 1853 (= var. *hyalina*).

(Groves and Bullock-Webster 1920, 127, Pl.16, Figs. 1-14 ; Pal et al. 1962, 72, Figs.133-142; Sundaralingam 1959, 19, Figs. 43-49; Wood and Imahori 1965, 655, 1964, Icones 349, 350; Islam and Sarma 1976, 60, Figs. 80-90; Krause 1997, 140, Fig.55, A-F; Langangen and Leghari 2001, 63; Subramanian 2002, 64, Pl. 18, Figs.1-4; Schubert and Blindow 2003, 186, Fig. 4.23.1: A-F; Naz et al. 2011, 94&97, Pl. 27, Figs. 1-10; Pl.28, Figs.1-9, Pl.29., Figs. 1-9)

*Material studied, locality and occurrence:* Col. No. N 5, March 2, 2005. Andharshura beel, Tanor, Rajshahi. Specimens intermingled with *Chara braunii* were collected from rice field (part of the beel).

During present investigation the specimen is interesting which has long stalked gametangia and twin antheridia, stalk 286- 1229 µm long, rarely simple ray 3-celled, dactyls sometimes unequal and various lengths in size. Islam and Sarma (1976) was the first to describe this species from Rajshahi.

### 4. *Nitellopsis obtusa* (Desv.) J. Groves (Fig. 1: J-K; Fig. 4: H, L)

*Synonyms:* *Chara obtusa* Desvaux in Loiseleur-Deslongchamps, Not. Pl. Fl. France,p.136.1810. *Nitellopsis stelligera* (Bauer in Reich.) Hy, Rev. Bot. 8: 46. 1890.

(Groves and Bullock-Webster 1924, 3, Pl. 24, Figs. 1-8; Pal et. al. 1962, 80, Figs. 171-175; Wood and Imahori 1965, 351; 1964, Icon 169; Islam et. al. 1988, 58, Figs 1-5; Krause, 1997, 128, Fig. 50: A-I; Subramanian 2002, 75, Pl. 24, Figs. 1-7; Langangen et. al. 2002, 30, Fig. 20; Schubert and Blindow 2003, 216, Fig. 4.28.1: A-J; Naz et. al. 2010, 203, Pl.1, Figs.1 -12; Pl. 2. Figs.1-10; Naz et al.2011,41&42,Pl.1,Figs.1-12)

*Material studied, locality and occurrence:* Col. No.1, March 15, 2004. Mahananda River, Chapai-Nawabgonj. The species was found with *Nitella flagelliformis*.

Bifid end cell of this species is an interesting feature which was observed only once.
